FK	movie_id	INTEGER

Customer can purchase one or many tickets but a ticket can' only be assign 1 or no customer

ticket can print one or more depending on the customer (for example i can purchase 3 avatar tickets) but a movie can only assign to one ticket (for exmple A ticket can't have two movies written it has to to be printed on another tick

customer doesnt need to purchase consession, so consession can be zero but because of the movie causes the customer to buy as much popcorn they need for the movie
